

The "ORACLE" Mk. I. CRYSTAL RECEIVER.

THE STAMP

OF QUALITY

The "Oracle" Receiver is primarily designed for receiving the British Broadcasting Company's Programme, but will also of course receive Morse, or spark Telegraphy over a considerable range, up to 120 miles. It is designed as a sturdy and simple Receiver which can be easily operated, even by a child, no batteries or other source of power being required, and no knowledge of Radio or Electricity is necessary for its successful use.

Full instructions for operating and Setting up the "Oracle" Receiver, and also for erecting the Aerial are enclosed with this set.

Details of the Complete "Oracle" Unit System for use when larger distances are to be covered, or greater efficiency is required are also enclosed.
